

**Assist your livestock's mineral intake,  
especially during drought conditions**

# **TNN COMPLEX LICK BLOCK**

**TNN Complex Lick Block has been developed in answer to  
the variable weather conditions that affect Australia**

**TNN Complex Lick Block is a complete mineral supplement  
that maintains or improves the digestive function and food  
utilisation of all ruminant animals in all climatic conditions  
with any type of feed**

**18 Kg  
Lick Block**

**TNN Complex Lick Block** comes in a convenient 18kg block in a biodegradable carton that is not affected by rain. TNN Complex Lick Block overcomes the challenges of oral administration or water medication where this is not available. Sheep and cattle will consume the product as required and consumption is self regulating according to individual need.

TNN Complex Lick Block has been developed to assist your livestock's mineral intake especially during drought conditions. TNN Complex Lick Block is a unique mineral supplement that helps maintains or improves the digestive function and food utilisation of all ruminant animals in most climatic conditions with any type of feed.

TNN Complex Lick Block is a combination of essential micro nutrients and macro elements that are needed for maximum digestive function and to maintain a strong immune function, and are blended together in a chelated and lignosulphonated form with salt and a small amount of molasses to maximize uptake and regulate consumption by the animal. The consumption of blocks will vary depending on the animal's immediate requirement, and good reserves of all elements will remain in the animal for extended periods of time.

Continued use of TNN Complex Lick Block will help keep a shine on coats and reduce the incidence of worm and fluke infestation, and will generally aid in the health of all ruminants.

This macro and micro nutrient is chelated (protected from becoming unavailable) in naturally occurring lignin compounds, for maximum rumen absorption and retention by your stock.

TNN Complex Lick Block may be used as an Ad-Lib mineral supplement for all classes of cattle and sheep.

## **BENEFITS**

- TNN Complex Lick Block addresses the need for a complete compliment of trace elements in chelated form to help over come the deficiency experienced in live stock.
- Animals need a balanced ration of minerals both macro and micro nutrients to be able to function at their optimal levels. TNN Complex Lick Block helps to maintain and correct these imbalances when present.
- TNN Complex Lick Block is designed to help maximise the digestive function of ruminants allowing the maximum utilisation of fodder intake, while maintaining or increasing weight and production.
- TNN Complex Lick Block is unique in that it contains Phosphorous, Calcium and Magnesium as well as crude protein equivalent plus reducing sugars.

**Copper, Zinc, Manganese, Cobalt, Selenium, Sulphur, Iodine,  
Magnesium, Calcium, Phosphorous, Crude Protein Equivalent,  
Reducing Sugars, Vitamins A, D, E, Salt & Molasses.**
